

Priyansh Vaish

priyansh.vaish01@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Computer Science undergraduate specializing in AI and Machine Learning, with applied experience across computer vision, applied machine learning, and retrieval-based systems. Comfortable working end-to-end – from model integration to backend deployment and evaluating systems for accuracy before shipping. Contributed to open-source software through academic and national-level initiatives such as FOSSEE, IIT Bombay.

EDUCATION

VIT Bhopal University

B.Tech in Computer Science (AI & ML) | CGPA: 8.67

Bhopal, India

2023 – 2027

TECHNICAL SKILLS

Languages: Python, C++, HTML5, CSS3, SQL

Generative AI: Retrieval-Augmented Generation (RAG), LLM Integration, Prompt Engineering

Data & ML: NumPy, Pandas, scikit-learn, Neural Networks, PyTorch

Computer Vision: OpenCV, YOLOv8, MediaPipe, Tesseract OCR, Depth Estimation, Image Processing

Backend & Cloud: FastAPI, Docker, Vercel, Supabase, Git

Tools & Frameworks: GitHub, n8n

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Computer Vision, Cloud Computing (AWS)

EXPERIENCE

FOSSEE – OSDAG, IIT Bombay

Summer Intern

May 2026 – Present

Mumbai, India

- Architected a client-side .3ps export/import engine using zlib and JSZip to compress and validate project archives.
- Engineered carbon emission calculations across 4 categories – materials, transportation, machinery, and traffic diversion – applying NITI Aayog and SSP/RCP emission standards.
- Modified 15+ React components and wrote unit tests validating emission formula accuracy across the platform.

PROJECTS

ResumeIQ – Resume Analyzer | [GitHub](#) *Python /FastAPI /FAISS /RAG /LLM Applications /Transformer Embeddings*

- Built RAG pipeline matching resumes to job requirements: 95.8% retrieval accuracy across 6 resume profiles.
- Segmented retrieval limiting LLM context to top-3 chunks, cutting input tokens 40-60%.
- Orchestrated an asynchronous FastAPI backend integrating 3 LLM providers, reducing API response latency by 30% through concurrent request handling.

FaceID Attendance System | [GitHub](#)

Python /OpenCV /face_recognition /Supabase

- Optimized a real-time face recognition system (OpenCV): 90% accuracy, sub-200 ms per-frame latency.
- Developed an offline encoding pipeline with session-scoped deduplication, reducing manual attendance reconciliation time by 95% for administrators.
- Established a dual-storage architecture (local CSV + Supabase PostgreSQL) enabling multi-location attendance tracking.

EchoVision – Real-Time Edge Vision Assistant | [GitHub](#)

Python /Depth-Anything V2 /OpenCV /Piper TTS

- Deployed Depth-Anything V2 for real-time hazard detection at 30 FPS, providing sub-200ms spatial feedback to assist visually impaired users in navigation.
- Devised a 3-region spatial engine (L/C/R) with Piper neural TTS and 15/30/45 degree turn guidance.
- Implemented modular Python architecture with cooldown logic to suppress duplicate real-time alerts.

ACHIEVEMENTS

Finalist – Inya.ai Buildathon (NASSCOM Initiative)

Oct 2025

Team Dikastirio | Track: Airlines Booking and Status

- Delivered Hermes, a bilingual AI flight assistant with Twilio-integrated voice/SMS support for bookings, cancellations, and live status queries – finalist among teams nationwide.

CERTIFICATIONS & EXTRACURRICULARS

- **NPTEL, IIT Kharagpur:** Cloud Computing (2025); Introduction to Internet of Things (2026)
- **Machine Learning Specialization** (3-Course Program) – DeepLearning.AI & Stanford University
- Design Team Member – AWS Cloud Club, VIT Bhopal University (2024–2025)
